

# XC6209 Series

ETR03006-010

High Speed LDO Regulators Low ESR Cap. Compatible, Output ON/OFF Control

## ■ GENERAL DESCRIPTION

The XC6209 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a voltage reference, an error amplifier, a current limiter and a phase compensation circuit plus a driver transistor.

Output voltage is selectable in 0.05V increments within a range of 0.9V ~ 6.0V.

The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series. The current limiter's foldback circuit also operates as a short protect for the output current limiter and the output pin.

The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

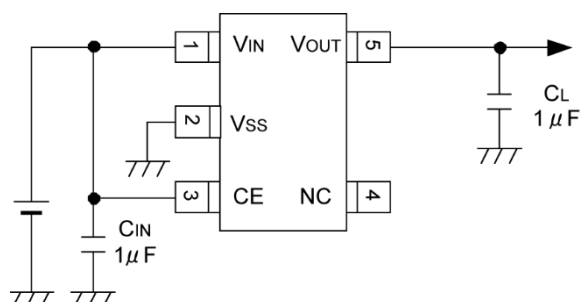

## ■ APPLICATIONS

- Smart phones / Mobile phones
- Portable game consoles
- Digital still cameras / Camcorders
- Digital audio equipments
- Reference voltage sources
- Multi-function power supplies

## ■ FEATURES

<b>Maximum Output Current</b>	: 150mA (300mA=XC6209 E to H types)
<b>Dropout Voltage</b>	: 60mV @ 30mA : 200mV @ 100mA
<b>Maximum Operating Voltage</b>	: 2.0V ~ 10V
<b>Output Voltage Range</b>	: 0.9V ~ 6.0V(0.05V increments)
<b>Highly Accurate</b>	: $\pm 2\%$ ( $V_{OUT} > 1.5V$ ) : $\pm 30mV$ ( $V_{OUT} \leq 1.5V$ )
<b>Low Power Consumption</b>	: 25 $\mu A$ (TYP.)
<b>Standby Current</b>	: Less than 0.1 $\mu A$ (TYP.)
<b>High Ripple Rejection</b>	: 70dB (10kHz)
<b>Operating Ambient Temperature</b>	: -40°C ~ 85°C
<b>Low ESR Capacitor Compatible</b>	: Ceramic capacitor
<b>Packages</b>	: SOT-25 USP-6B SOT-89-5
<b>Environmentally Friendly</b>	: EU RoHS Compliant, Pb Free

## ■ TYPICAL APPLICATION CIRCUIT

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

## PIN CONFIGURATION

\*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the Vss pin.

## PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
SOT-25	SOT-89-5	USP-6B		
1	4	1	VIN	Input
2	2	5	VSS	Ground
3	3	6	CE	ON/OFF Control
4	1	2,4	NC	No Connection
5	5	3	VOUT	Output

## FUNCTIONS

TYPE	CE	OPERATIONAL STATE
Type A, B, E, F	H	ON
	L	OFF
Type C, D, G, H	H	OFF
	L	ON

H=High Level

L=Low Level

## ■PRODUCT CLASSIFICATION

### ●Ordering Information

XC6209①②③④⑤⑥-⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type of Regulator CE Pin Logic	A	150mA, Active High, Pull-down resistor built-in <sup>(*)2</sup> (Semi-custom)
		B	150mA, Active High, No pull-down resistor (Standard)
		C	150mA, Active Low, Pull-up resistor built-in <sup>(*)2</sup> (Semi-custom)
		D	150mA, Active Low, No pull-up resistor (Semi-custom)
		E	300mA <sup>(*)1</sup> , Active High, Pull-down resistor built-in <sup>(*)2</sup> (Semi-custom)
		F	300mA <sup>(*)1</sup> , Active High, No pull-down resistor (Standard)
		G	300mA <sup>(*)1</sup> , Active Low, Pull-up resistor built-in <sup>(*)2</sup> (Semi-custom)
		H	300mA <sup>(*)1</sup> , Active Low, No pull-up resistor (Semi-custom)
②③	Output Voltage	09~60	Output Voltage Range: 0.9V~6.0V e.g. : 3.0V⇒②=3, ③=0
		30~60	For 1% product, output voltage range is 3.0V~6.0V.
④	Output Voltage Accuracy	2	0.1V increments, Accuracy: ±2% <sup>(*)3</sup> e.g.: 2.80V⇒②=2, ③=8, ④=2
		1	0.1V increments, Accuracy: ±1% e.g.: 3.00V⇒②=3, ③=0, ④=1
		A	0.05V increments, Accuracy: ±2% <sup>(*)3</sup> e.g.: 2.85V⇒②=2, ③=8, ④=A
		B	0.05V increments, Accuracy: ±1% e.g.: 3.05V⇒②=3, ③=0, ④=B
⑤⑥-⑦ <sup>(*)4</sup>	Packages (Order Unit)	MR-G	SOT-25 (3,000/Reel)
		PR-G	SOT-89-5 (1,000/Reel)
		DR-G	USP-6B (3,000/Reel)

<sup>(\*)1</sup> The maximum output current of type E~H depends on setting output voltage.

<sup>(\*)2</sup> With the pull-up resistor or pull-down resistor built-in types, the supply current during operation will increase by  $V_{IN} / 2M\Omega$  (TYP.).

<sup>(\*)3</sup> The output voltage accuracy is ±30mV at  $V_{OUT} \leq 1.5V$ .

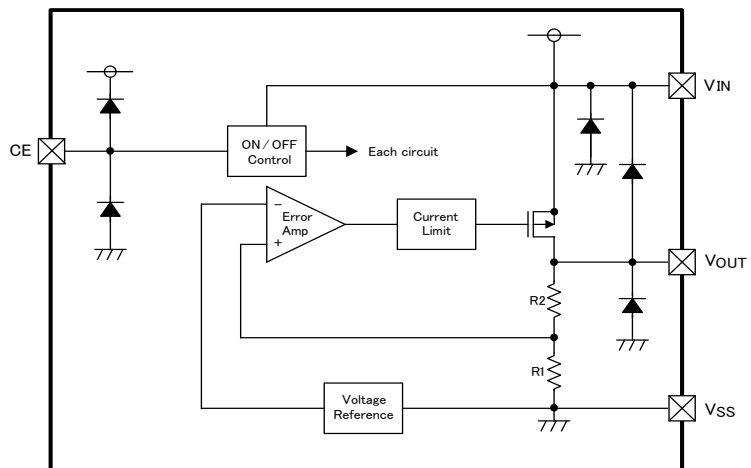

<sup>(\*)4</sup> The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

## ■ BLOCK DIAGRAM

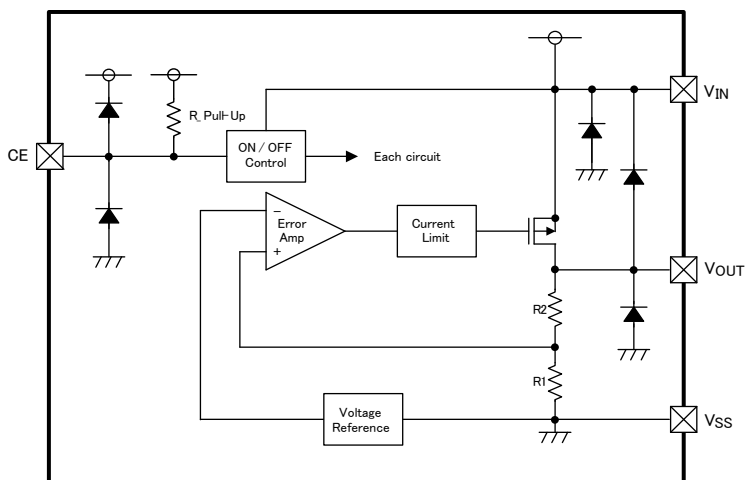

XC6209 Type A, E

XC6209 Type B, D, F, H

XC6209 Type C, G

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

\*2: V<sub>OUT(T)</sub> is Nominal output voltage

\*3: V<sub>OUT(E)</sub> is Effective output voltage

(I.e. the output voltage when "V<sub>OUT(T)</sub>+1.0V" is provided at the V<sub>IN</sub> pin while maintaining a certain I<sub>OUT</sub> value).

\*4: V<sub>dif</sub>={V<sub>IN1</sub>-V<sub>OUT1</sub>}

V<sub>OUT1</sub> is the voltage equal to 98% of the output voltage whenever an amply stabilized V<sub>OUT(T)</sub>+1.0V is input for every I<sub>OUT</sub>.

V<sub>IN1</sub> is the input voltage when V<sub>OUT1</sub> appears while input voltage is gradually decreased.

\*5: If V<sub>OUT(T)</sub> is less than 1.45V, V<sub>OUT(T)</sub>-30mV (MIN.), V<sub>OUT(T)</sub>+30mV (MAX.)

\*6: Only for the V<sub>OUT(T)</sub> is more than 3.0V products.

\*7: Please refer to the "Dropout Voltage" table.

1.00 ~ 1.05	2.5	260
1.10 ~ 1.15	2.6	270
1.20 ~ 1.25	2.7	290
1.30 ~ 1.35	2.8	300
1.40 ~ 1.45	2.9	
1.50 ~ 1.95	3.0	
2.00 ~ 6.00	V <sub>OUT(T)</sub> + 1.0	

\* V<sub>OUT(T)</sub> is Nominal output voltage value.

## ■ OPERATIONAL EXPLANATION

Output voltage control with the XC6209 series:

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier.

The P-channel MOSFET, which is connected to the VOUT pin, is then driven by the subsequent output signal. The output voltage at the VOUT pin is controlled & stabilized by a system of negative feedback.

The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

### <Low ESR Capacitors>

With the XC6209 series, a stable output voltage is achievable even if used with low ESR capacitors as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor ( $C_L$ ) is connected as close as possible to the output pin (VOUT) and the VSS pin. Please use an output capacitor with a capacitance value of at least  $1\mu\text{F}$ . Also, please connect an input capacitor ( $C_{IN}$ ) of  $1\mu\text{F}$  between the VIN pin and the VSS pin in order to ensure a stable power input.

Stable phase compensation may not be ensured if the capacitor runs out capacitance when depending on bias and temperature. In case the capacitor depends on the bias and temperature, please make sure the capacitor can ensure the actual capacitance.

### <Current Limiter, Short-Circuit Protection>

The XC6209 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

### <CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6209 series. In shutdown mode, output at the VOUT pin will be pulled down to the VSS level via R1 & R2. The operational logic of the IC's CE pin is selectable (please refer to the selection guide). Note that as the standard XC6209B type is 'Active High /No Pull Down', operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC's in operation.

We suggest that you use this IC with either a VIN voltage or a VSS voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry

## ■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen VIN and VSS wiring in particular.
3. Please wire the input capacitor ( $C_{IN}$ ) and the output capacitor ( $C_L$ ) as close to the IC as possible.
4. The IC is controlled with constant current start-up. Start-up sequence control is requested to draw a load current after even nominal output voltage rising up the output voltage.
5. Torex places an importance on improving our products and their reliability.  
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
